# COMPONENTS

## Primary Frame

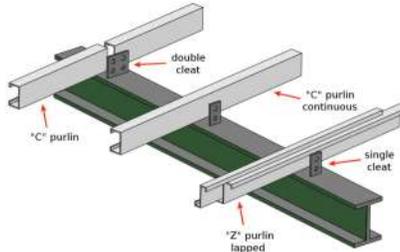

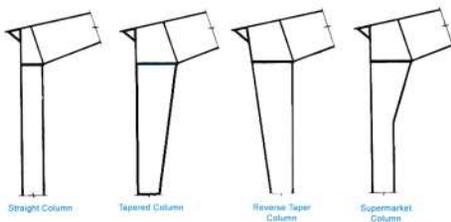

Pre-engineered steel building is portal frame construction comprises of primary and secondary framing and bracing system. A combination of these three elements and weather covering sheeting results in stable steel buildings instead of individual frame.

## Secondary Structural Frames

Secondary framing system is mainly purlin and girt of Z or C shapes of various sizes.

## Roof and Wall Panels

PEB shades & Curtain Wall made of Glass & Roll-formed steel sheets usually comes in the category. From transfer of wind force and other acting loads from building frame to the foundation at certain interval.

## Mezzanine System

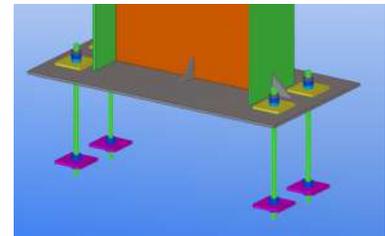

Factory or warehouse building shop floor office, production offices, stores, maintenance office, wash rooms, canteen etc.

## Decking Sheet

Decking Sheets are flat surfaces or platforms capable of supporting flooring and roofing sheets and these are connected to the outer or inner part of building structure.

## Anchoring

it is necessary to have an anchoring system suitably designed to take up various loads and forces of the building and to transfer the same to the ground through anchor bolts arrangement.

## Paints and Finishes

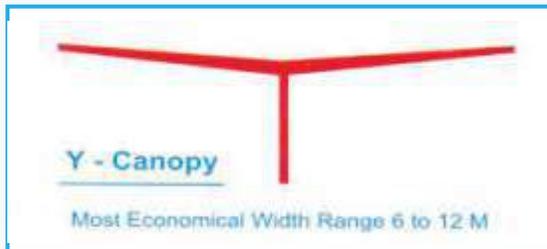

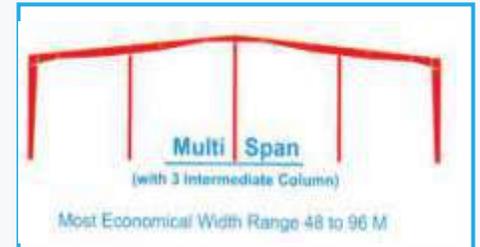

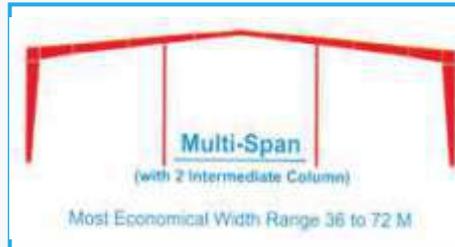

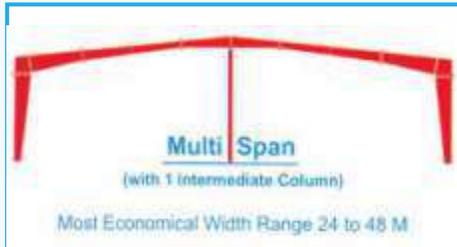

Pre-painted steel is produced on modern, high-speed coil painting lines where surface preparation prior to painting, paint application.

## Building Accessories

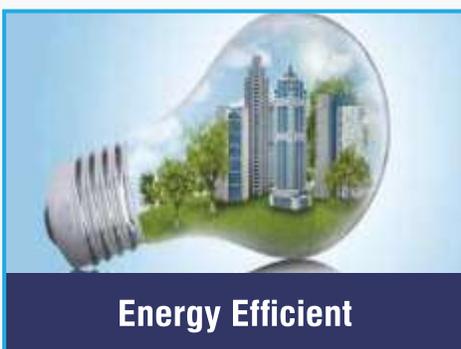

There are various other building elements which may not be important structurally but very important functionally and it adds performance of the building. Skylight, wall light, Doors, windows, louvers, ventilators, turbo-vent, insulations, roof curb etc.
